The presentation will briefly overview a University of Waikato project seeking to present the main international sources of information for both university hydrology academics (for teaching purposes) and also for potential PhD students in hydrology (to find suitable university departments). It is anticipated that the overview will include current texts, web resources, case studies and data sets, available computer models, and journals most suited to university teaching support for hydrology at various levels. A case will also be made for an IAHS initiative setting up a searchable data base of hydrology PhD supervisors for international students. As the overview is currently work in progress and the subject area is large, all contributions from colleagues are most welcome up to the conference time – please send information on your favourite hydrology teaching support material to Dr Michelle Yueh, e-mail: myueh@waikato.ac.nz
