Chinese Meridian Chain Meridian Project is a ground-based network program to monitor Solar-Terrestrial space environment, which consists of a chain of ground-based observatories with multiple instruments including magnetometers, ionosondes, HF and VHF radar, Lidar, IPS monitors, sounding rockets etc. The chain is mainly located in the neighborhood of 120°E meridian, and is thus named the Meridian Project. Meridian Project has officially been approved by the Chinese government. The project started construction in 2008, and will be in operation in 2011. This talk will give an overview, the recent progress and preliminary observational results of the Chinese Peridian Project.
