

ECSNet: the IUGG Early-Career Scientists Network

This project unifies all IUGG Associations in a new network of Early-Career Scientist – ECS and aims to mobilize the next generations. We will encourage the collaboration between ECS from all IUGG Associations and the participation of new researchers and students. It will include regular content on “how to get involved”, monthly online meetings, a new blog and one presential meeting, as a seed to ECS regular international meetings.

The main objectives are: (i) unify all IUGG Associations by promoting international cooperation between ECSs, (ii) mobilize the next generations to be part of the IUGG network, (iii) encourage the participation of new researchers and students and (iv) attract the attention of the general public by providing appealing content about Earth and space sciences.
